

Amendments to the Specification

Please replace paragraph [0047] with the following amended paragraph:

[0047] A ~~[[An]]~~ typical adhesive for securing the device directly to the skin is a pressure sensitive adhesive (PSA). The direct-attaching PSA and the base where the PSA is affixed are typically configured whereby the PSA has an adhesive affixment to the device greater than the adhesive affixment to the skin. The PSA is typically configured for permanent affixment to the device. The PSA is also selected for a secure though releasable affixment to the skin. These criteria ensure that the device can be securely affixed to the skin for ~~[[or]]~~ the injection procedure, and can be safely and efficiently removed from the skin thereafter.

Please replace paragraph [0059] with the following amended paragraph:

[0059] Typically the injection needle is ~~configures~~ configured to be substantially linear or straight, from its tip toward the opposed inlet opening. The needle can be configured to be linear to its inlet end, or can be configured having a bent or curved portion near the inlet opening.
